Task 5)

Share an S3 bucket with another AWS account using an IAM Role so that only the IAM user with sts:AssumeRole permission can assume the role and access the S3 bucket.

Or

Share an S3 bucket from **Deep Meshram** account with **Kartik Deogade** account using an IAM Role. In Kartik's account, **user1 should be able to assume the role** and access the S3 bucket, but **user2 should not be able to assume the role.**

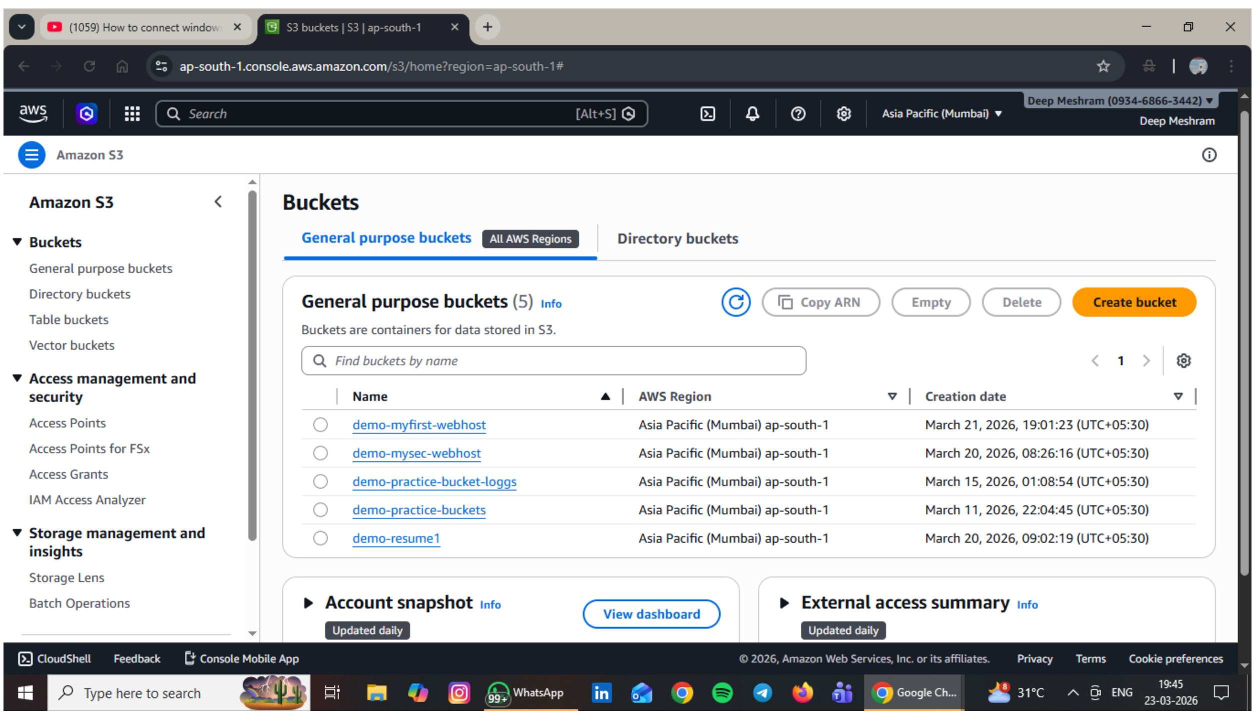
Account A – Deep Meshram (Bucket Owner Account) i.e Trusting account

Account B- Kartik Deogade (Trusted account)

From Account A

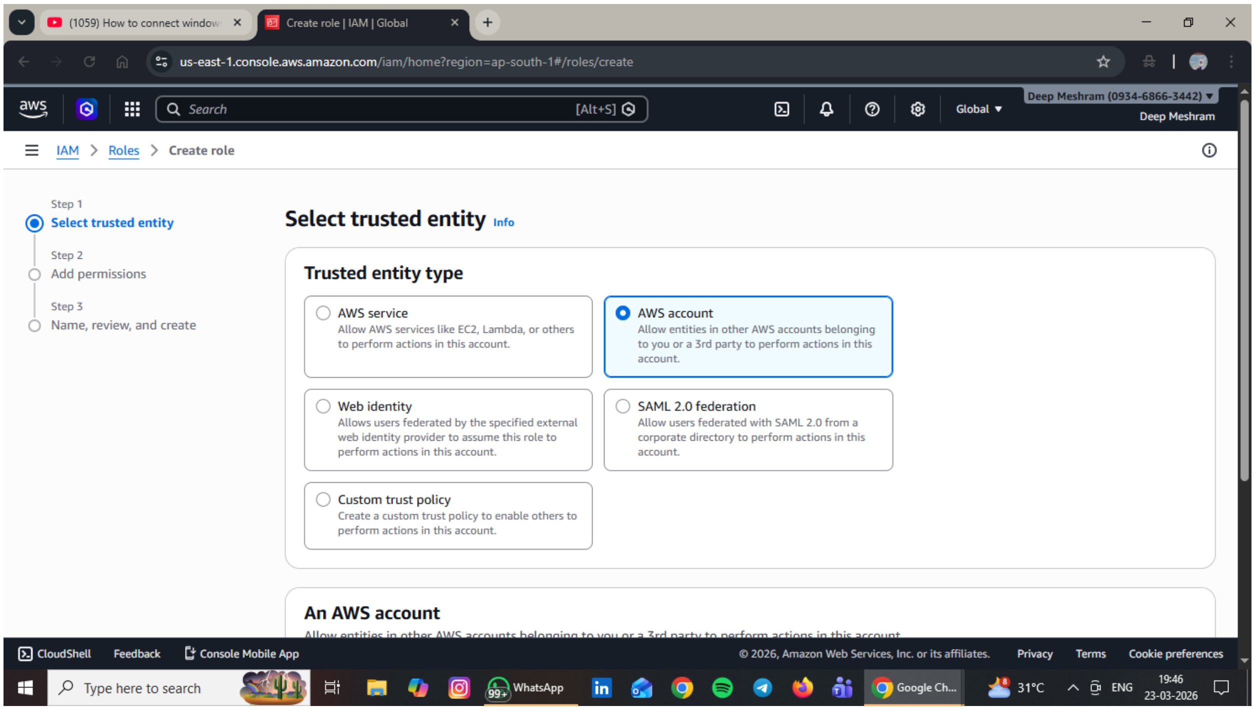
Step 1: Create S3 Bucket

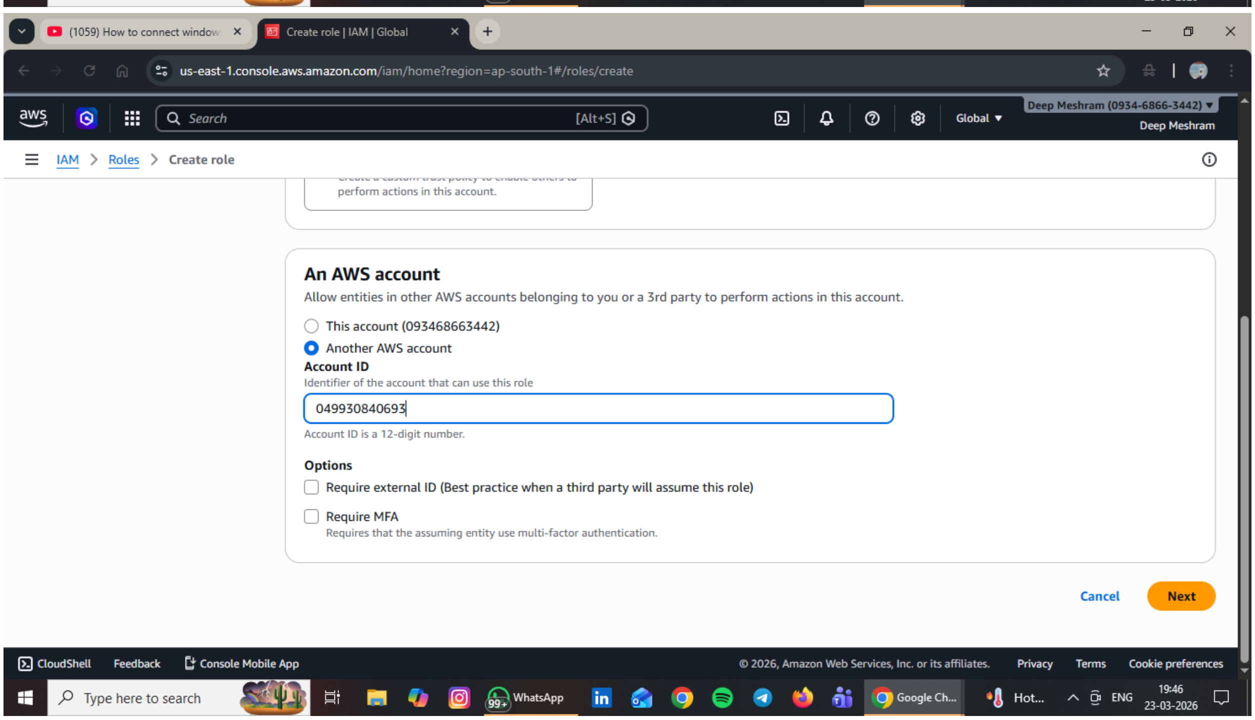
Go to S3 → Create Bucket, enter bucket name and create the bucket.



Step 2: Create IAM Role for Kartik Account

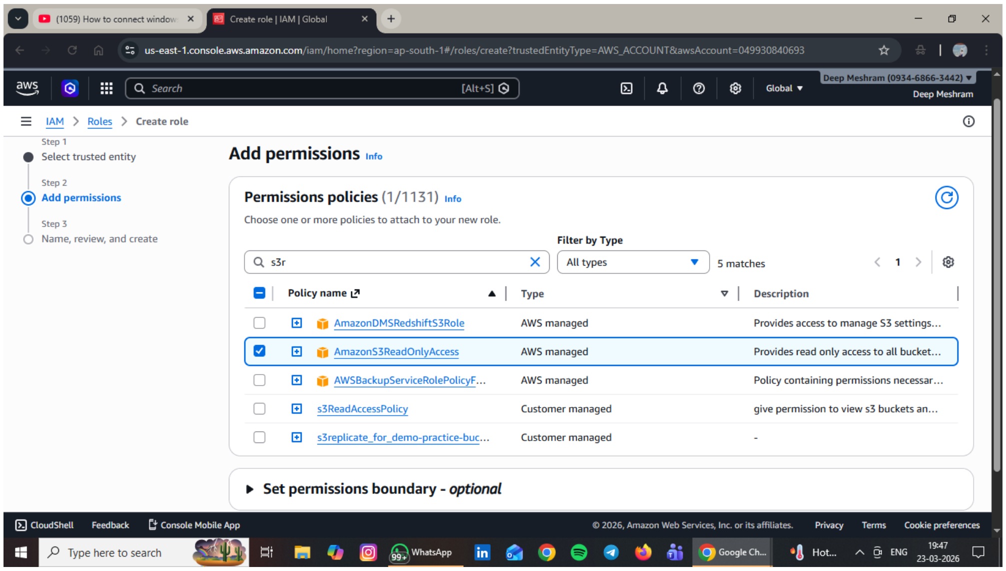
Go to IAM → Roles → Create Role → Another AWS Account → Enter Kartik Deogade Account ID → Click Next.





Step 3: Attach S3 Permission Policy to Role

Attach a custom policy that allows AmazonS3ReadOnlyAccess

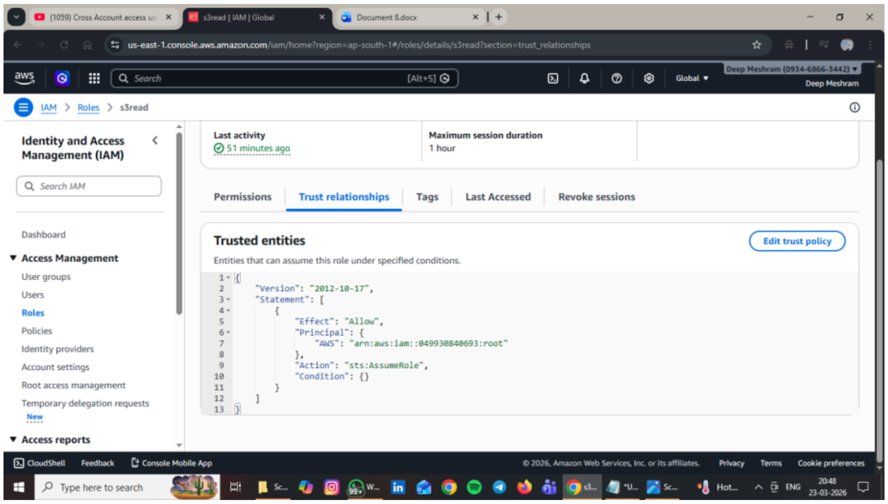


Step 4: Check Trust Relationship

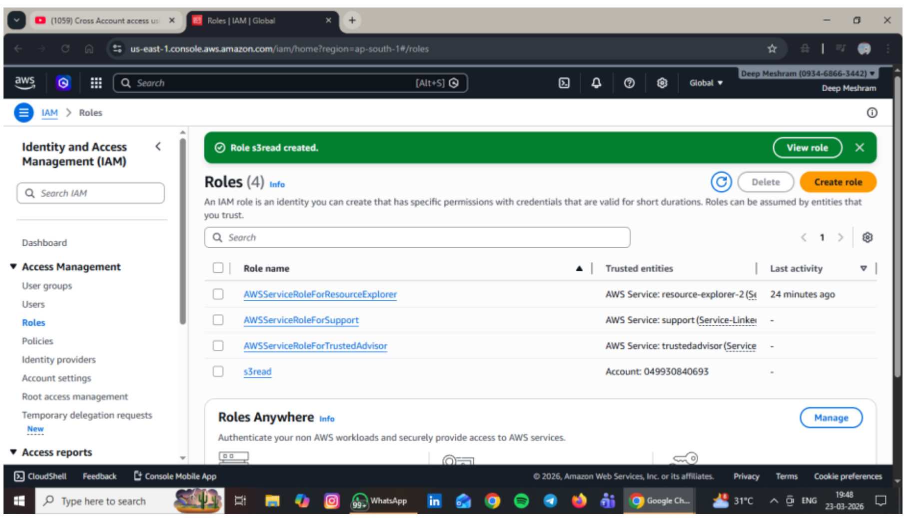
Go to Role → Trust Relationships → Edit Trust Policy and add Kartik account.

JSON

```
{
 "Version": "2012-10-17",
 "Statement": [
  {
   "Effect": "Allow",
   "Principal": {
    "AWS": "arn:aws:iam::KARTIK-ACCOUNT-ID:root"
   },
   "Action": "sts:AssumeRole"
  }
 ]
}
```



Step 5: create role with name s3read



Now From Account B – Kartik Deogade (Trusted Account)

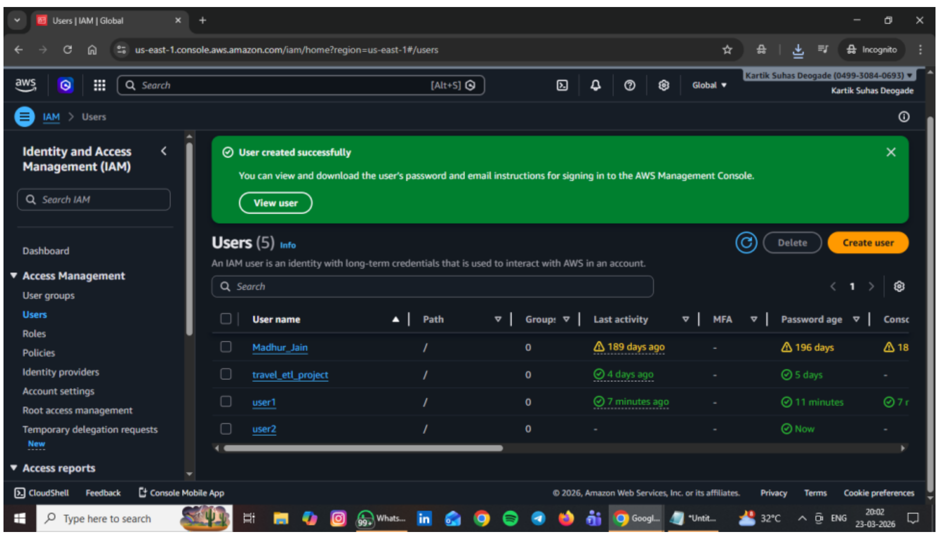
Step 6: Create IAM Users

Create two IAM users:

user1

user2

Go to IAM → Users → Create User.



Step 7: Give sts:AssumeRole Permission to user1 Only

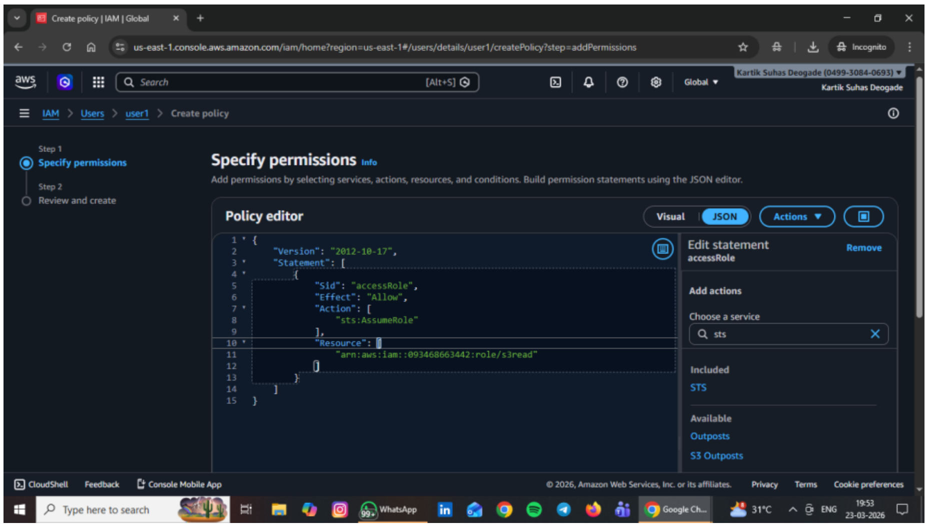
Go to IAM → user1 → Add Inline Policy → JSON and add:

JSON

```
{
 "Version": "2012-10-17",
 "Statement": [
  {
   "Effect": "Allow",
   "Action": "sts:AssumeRole",
   "Resource": "arn:aws:iam::DEEP-ACCOUNT-ID:role/ROLE-NAME"
```

```
    }
  ]
}
```

Note: user2 does NOT get this permission.



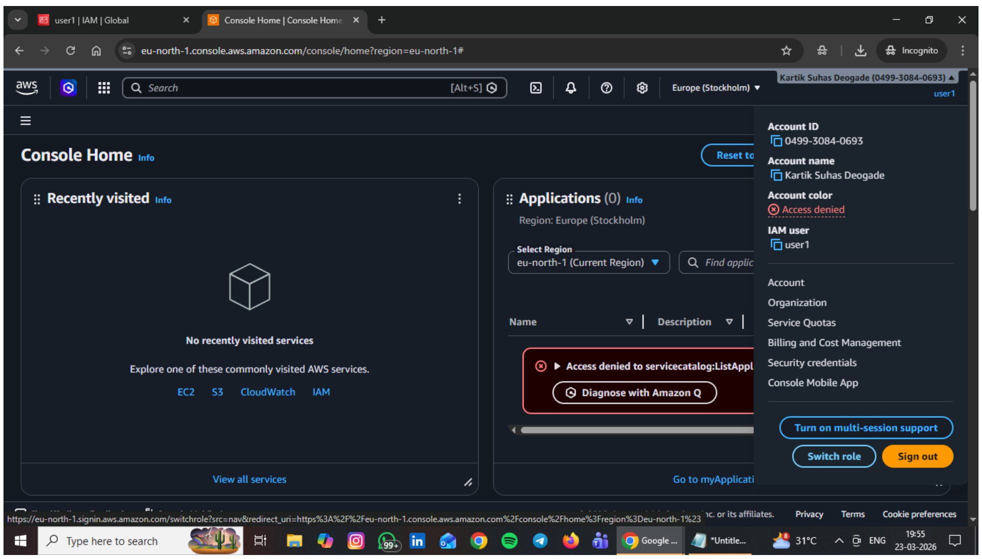
Step 8: Switch Role Using user1

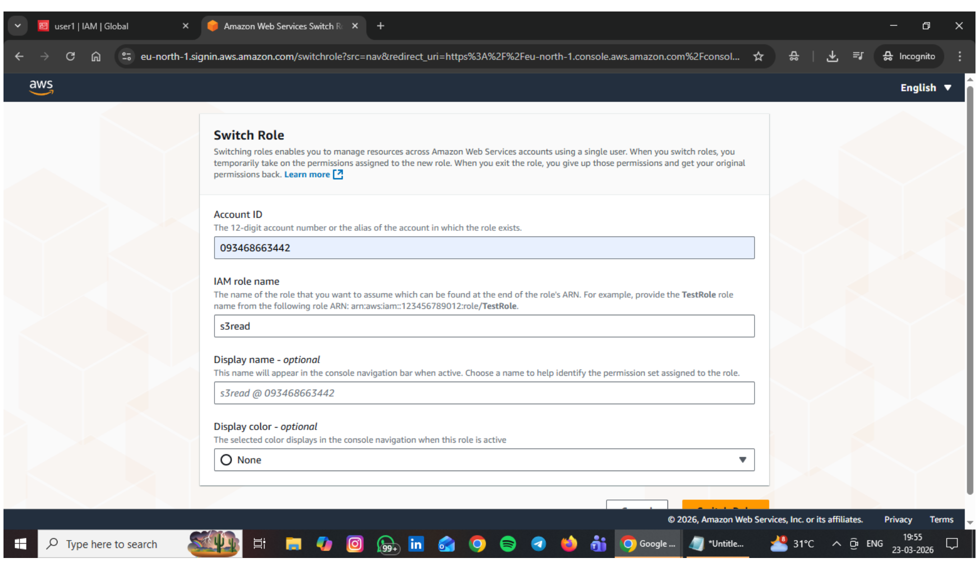
Login as user1 → Click Switch Role → Enter:

Account ID → Deep Meshram Account ID

Role Name → Role created in Account A

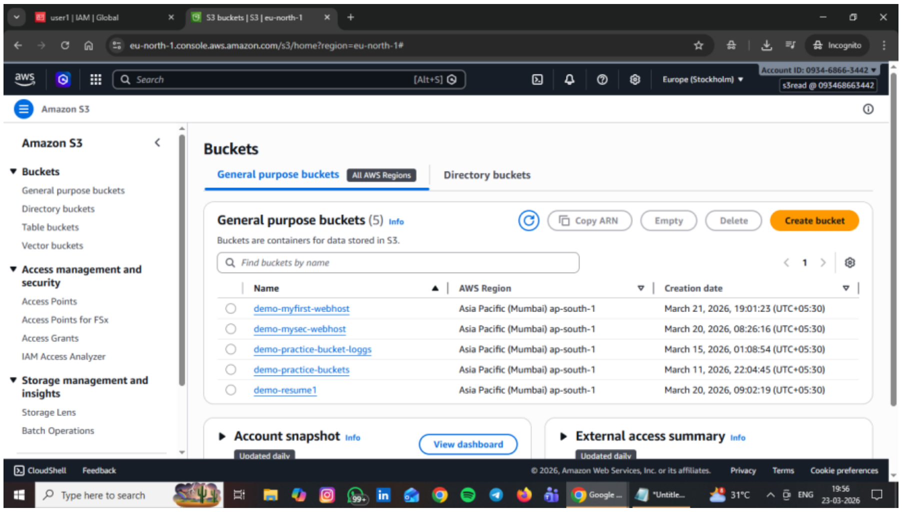
Display Name → Any name → Click Switch Role





Step 9: Verify S3 Access (user1)

After switching role → Go to S3 → Bucket → Objects → user1 can list and download objects.



Step 10: Verify Switch Role from user2 (Should Fail)

Login as user2 → Try Switch Role → Enter Account ID and Role Name →

Switch Role will fail / Access Denied because user2 does NOT have sts:AssumeRole permission.
