

Task 4)

Host a static website using Amazon S3 by uploading website files and enabling static website hosting with public access permissions.

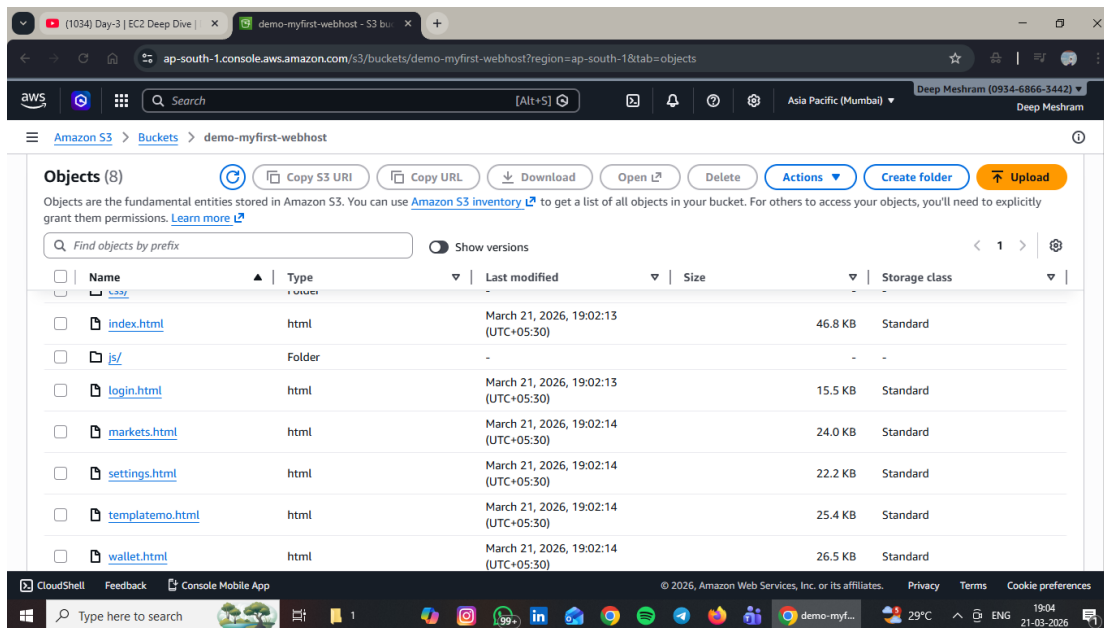

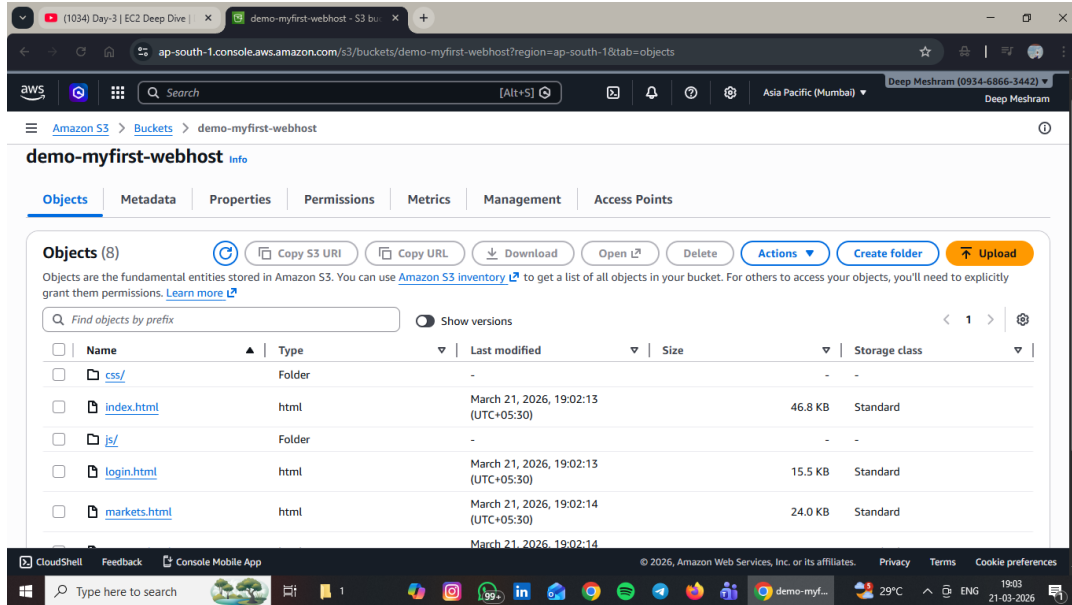

Step 1: Create S3 Bucket

Go to S3 → Create Bucket, enter a unique bucket name, select region, and uncheck Block all public access.

Step 2: Upload Website Files

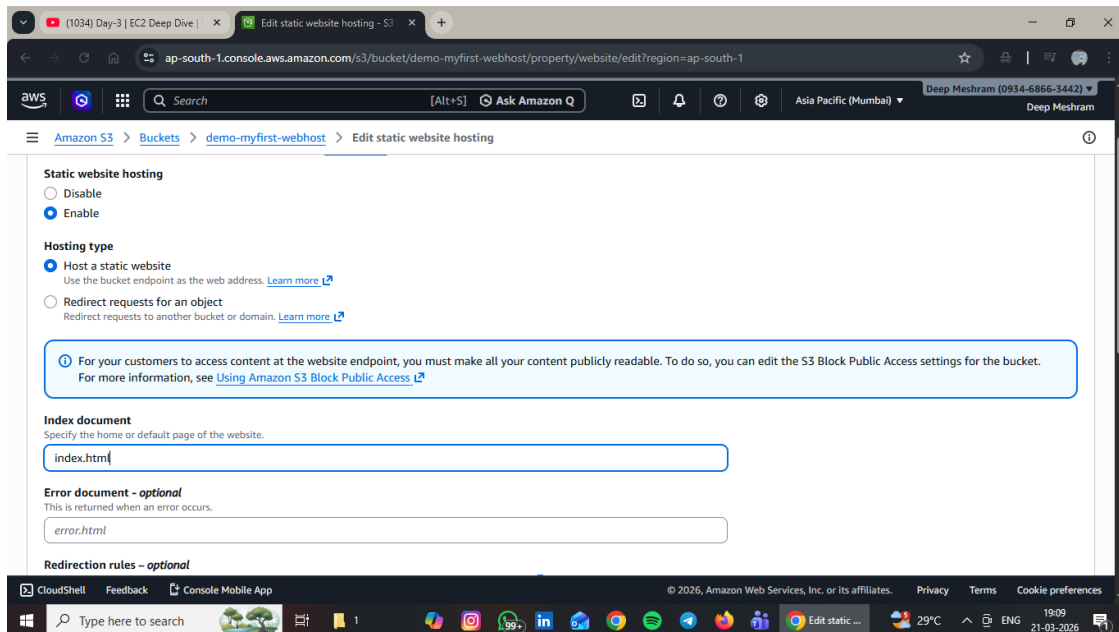

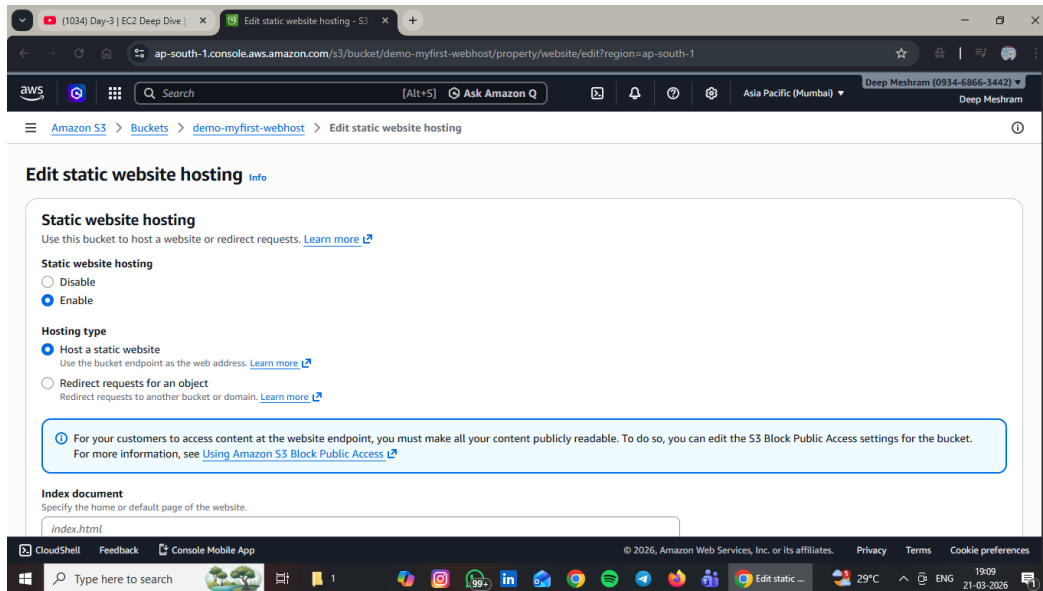

Open the bucket → Click Upload → Upload index.html (and other website files)

Step 3: Enable Static Website Hosting

Go to Bucket → Properties → Static Website Hosting → Enable → Enter:

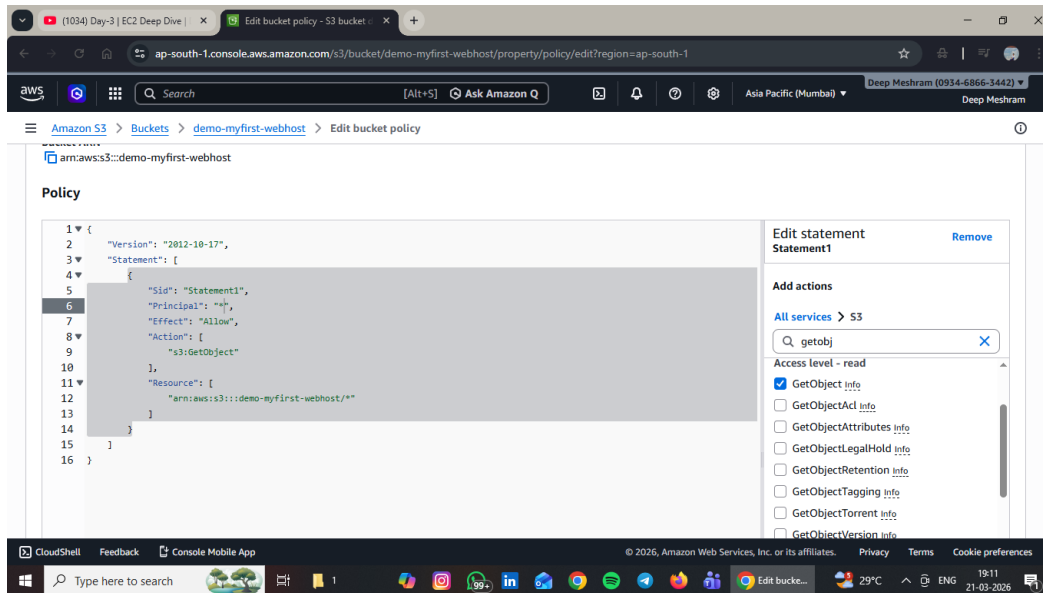

Index document: index.html

Step 4: Add Bucket Policy for Public Access

Go to Permissions → Bucket Policy and add the following policy:

JSON

Step 5: Access Static Website

Go to Properties → Static Website Hosting → Bucket Website Endpoint and open the URL in the browser to view the website.
