

Task 12)

Launch an EC2 instance using user data to host a simple website, create an AMI from that instance, share the AMI with another AWS account, launch an EC2 instance from the shared AMI in the other account, and verify the website.

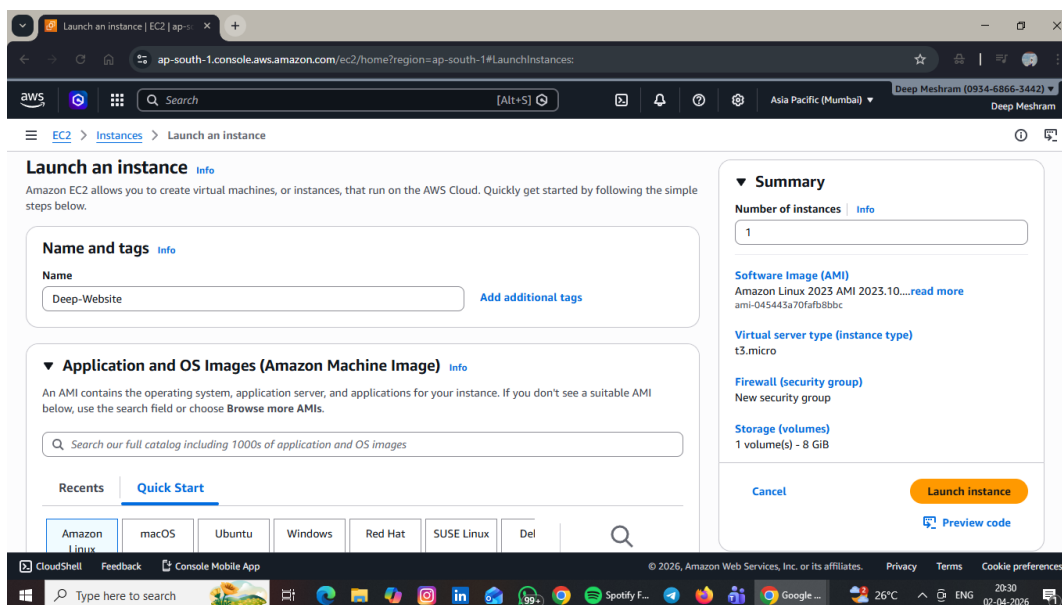

Source account:- Deep Meshram

Destination account:- Kartik Deogade

Steps in Deep Account

Step 1: Launch EC2 Instance

Go to EC2 → Launch Instance → Select Amazon Linux → Configure Security Group → Allow HTTP & SSH.

Step 2: Add User Data Script.

Bash:

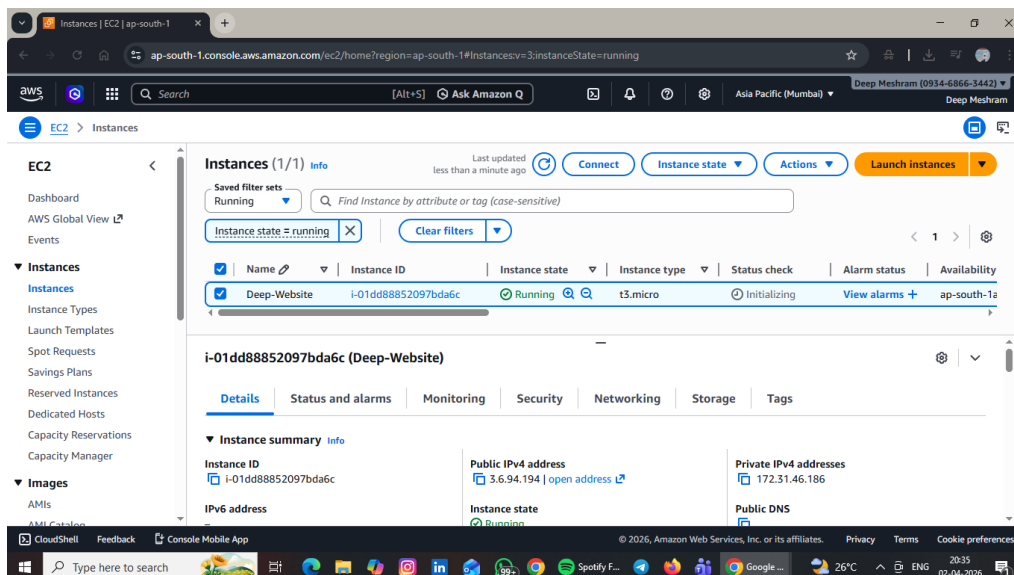

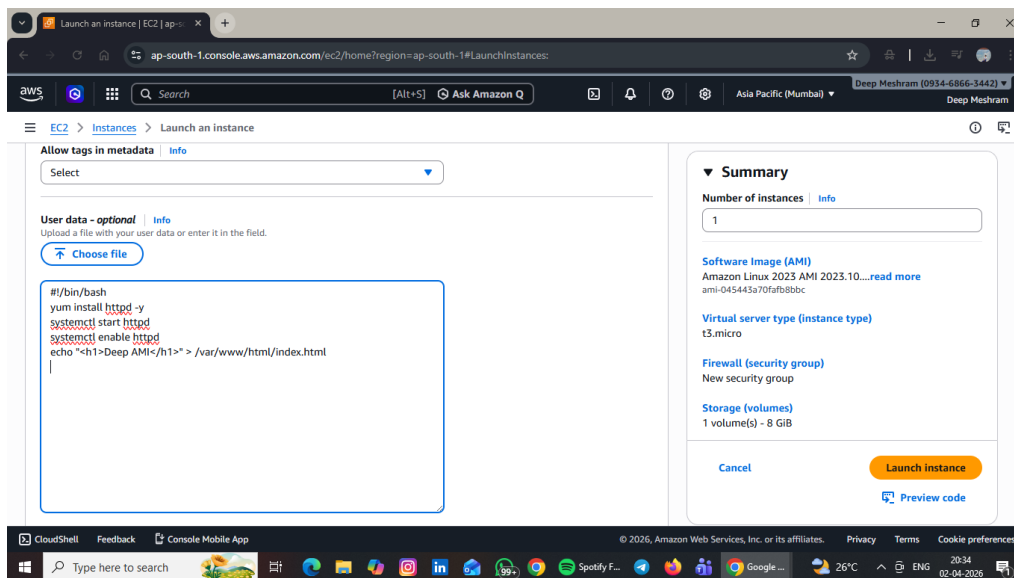

```
#!/bin/bash
```

```
yum install httpd -y
```

```
systemctl start httpd
```

```
systemctl enable httpd
```

```
echo "<h1> Deep AMI</h1>" > /var/www/html/index.html
```

Step 3: Verify Website

Open browser:

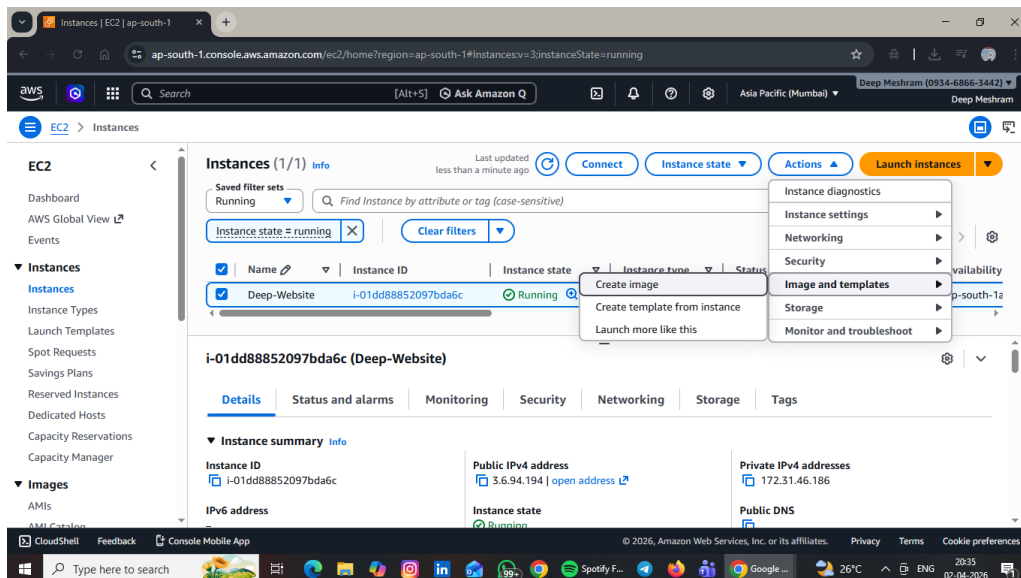

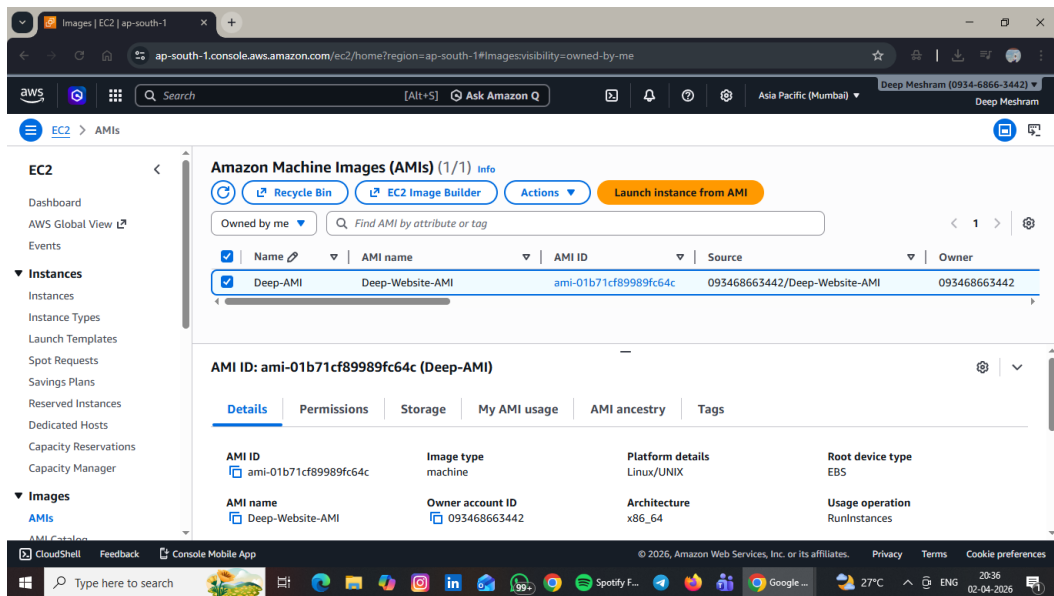

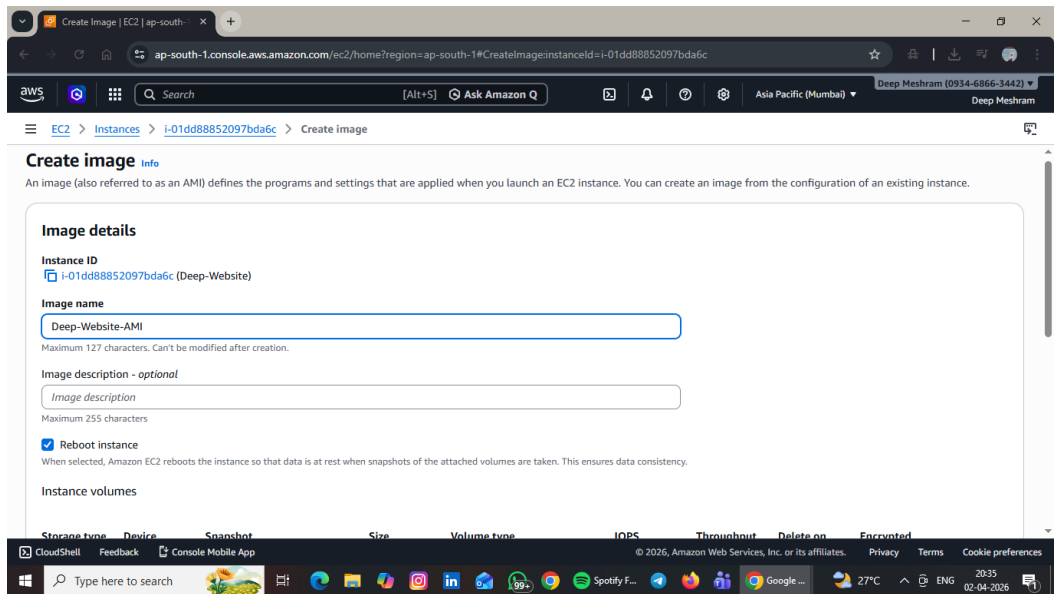

Deep AMI

Step 4: Create AMI

Go to EC2 → Instances → Select Instance → Actions → Image → Create Image.

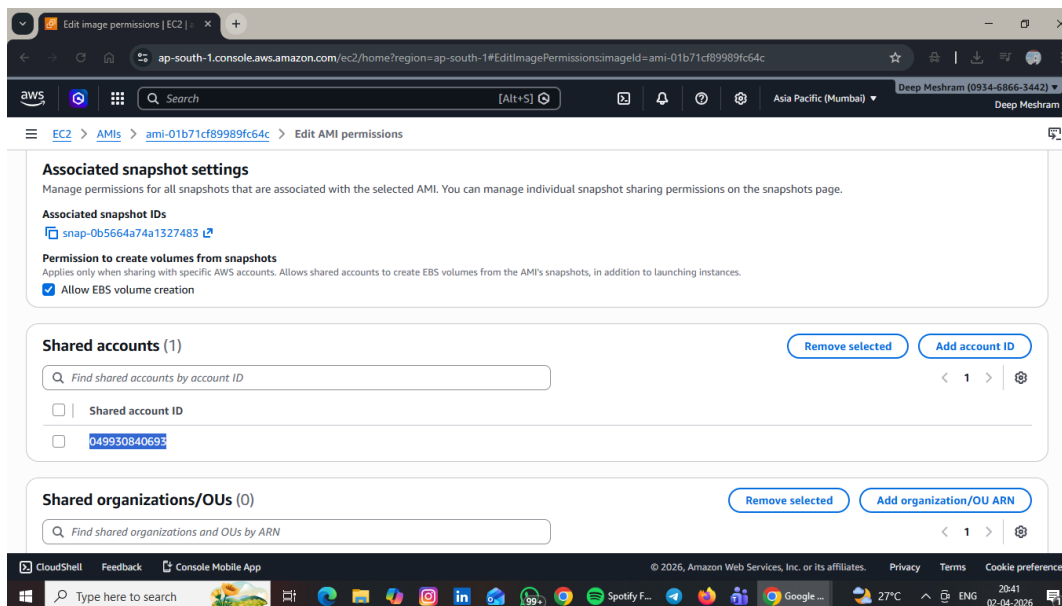

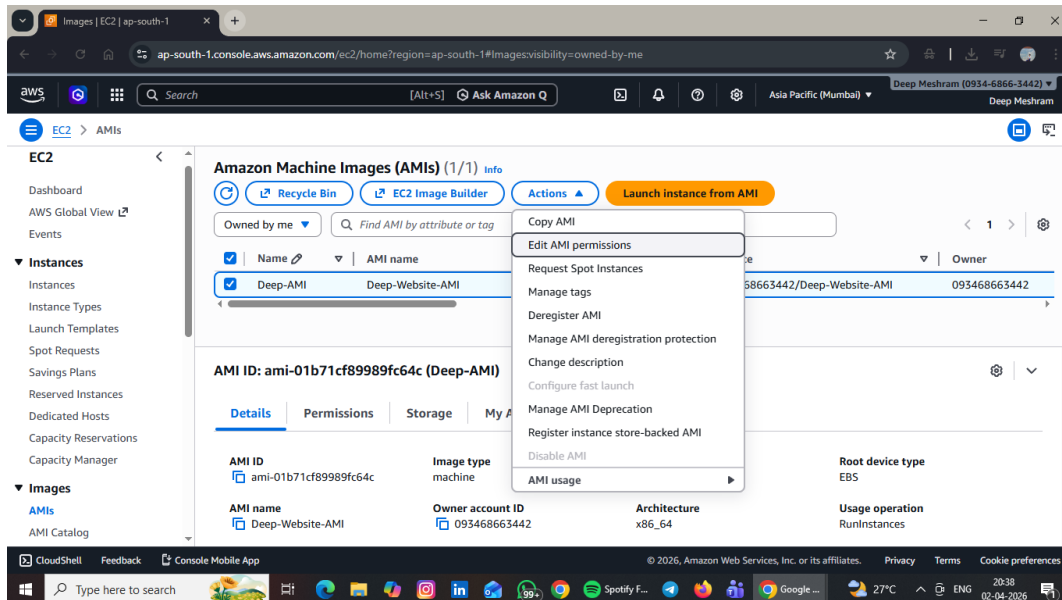

Step 5: Share AMI with Kartik Account

Go to EC2 → AMI → Select AMI → Actions → Modify Image Permission → Add Kartik Account ID → Save.

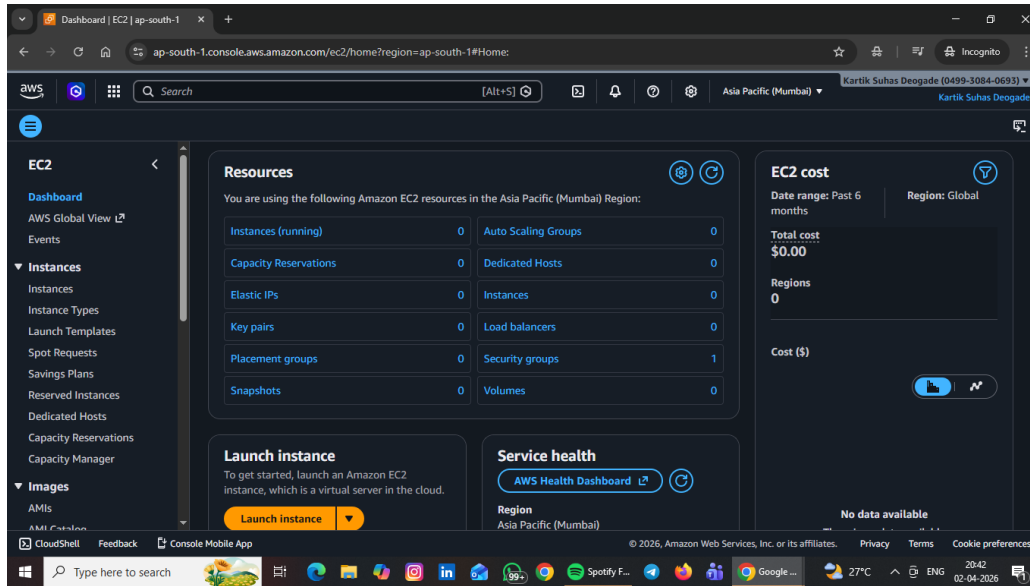

Note:- also allow EBS volume creation

Steps in Kartik Account

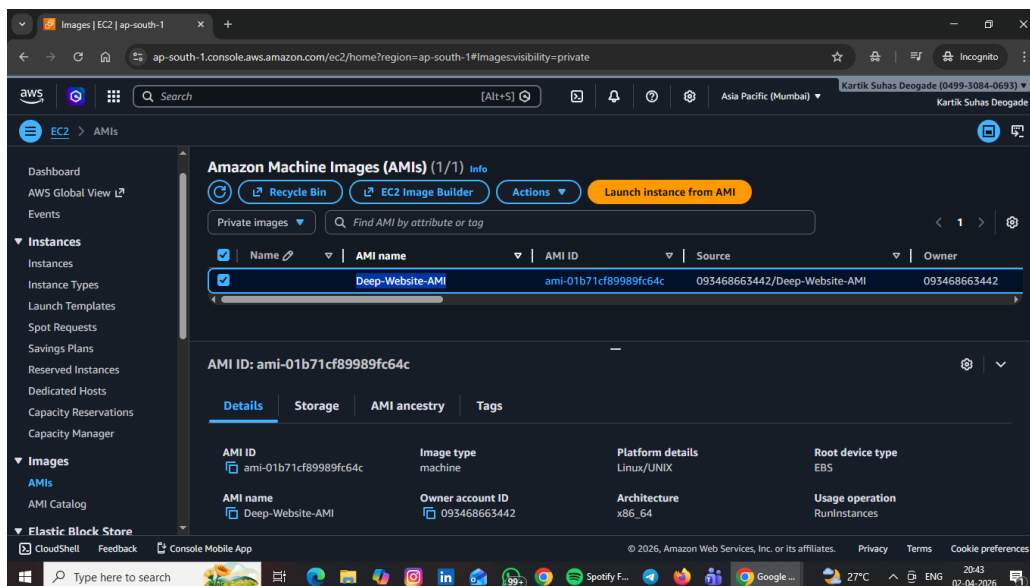

Step 7: Login to Kartik Account

Login to Kartik AWS account.

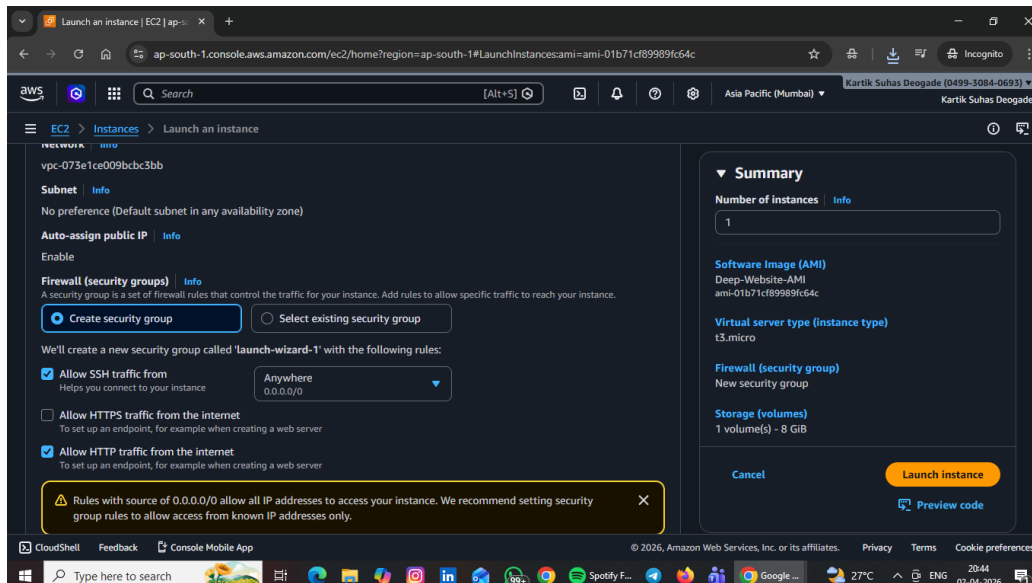

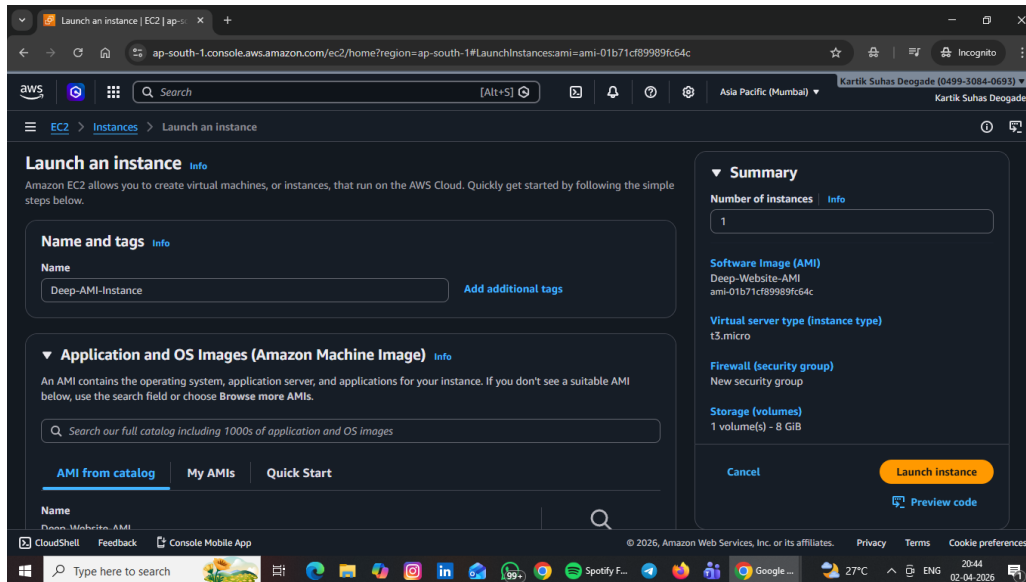

Step 8: Open Private AMI

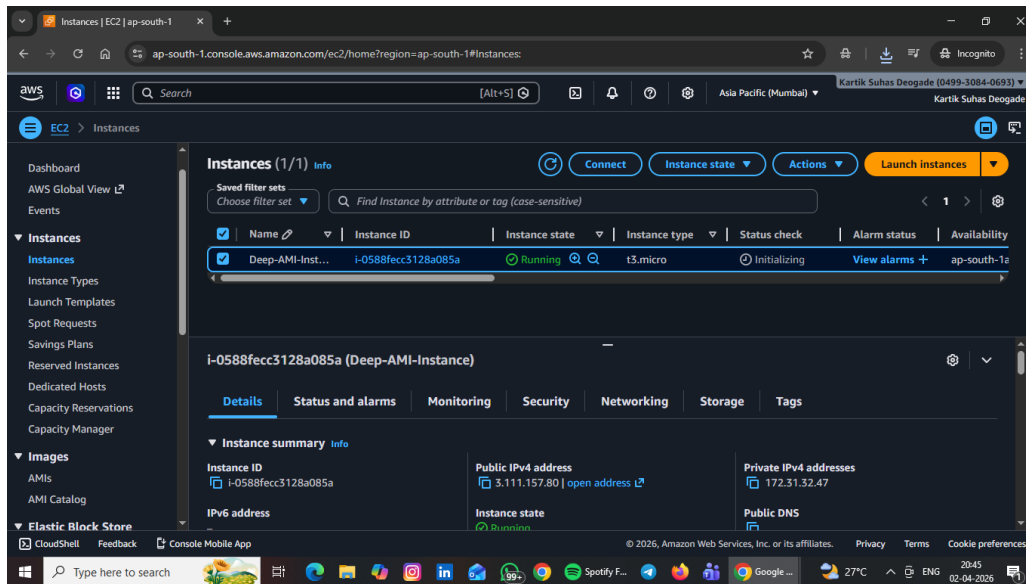

Go to EC2 → AMI → Shared with me → Select private AMI.

Step 9: Launch EC2 from Shared AMI

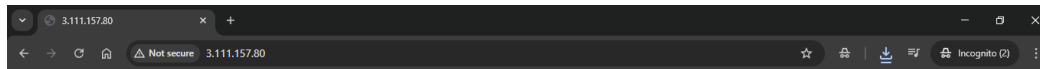

Click Launch Instance → Allow HTTP & SSH → Launch.

Step 10: Verify Website

Open browser:

Deep AMI

Final Result :

The AMI created in Deep account using a user data website was successfully shared with Kartik account, and the website was verified after launching an EC2 instance from the shared AMI.
