

Task 2)

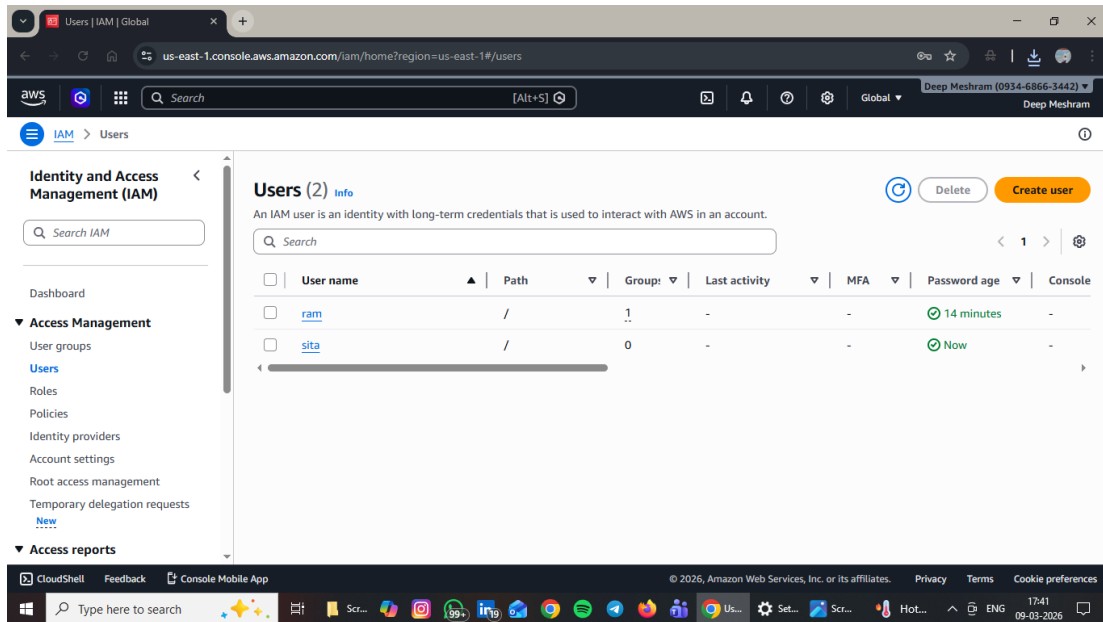

Create IAM user sita , Create a custom IAM policy that allows Amazon RDS read and list permissions only in the Mumbai region (ap-south-1) and restricts access in all other regions. Attach this policy to IAM user sita.

Step 1) Create IAM User

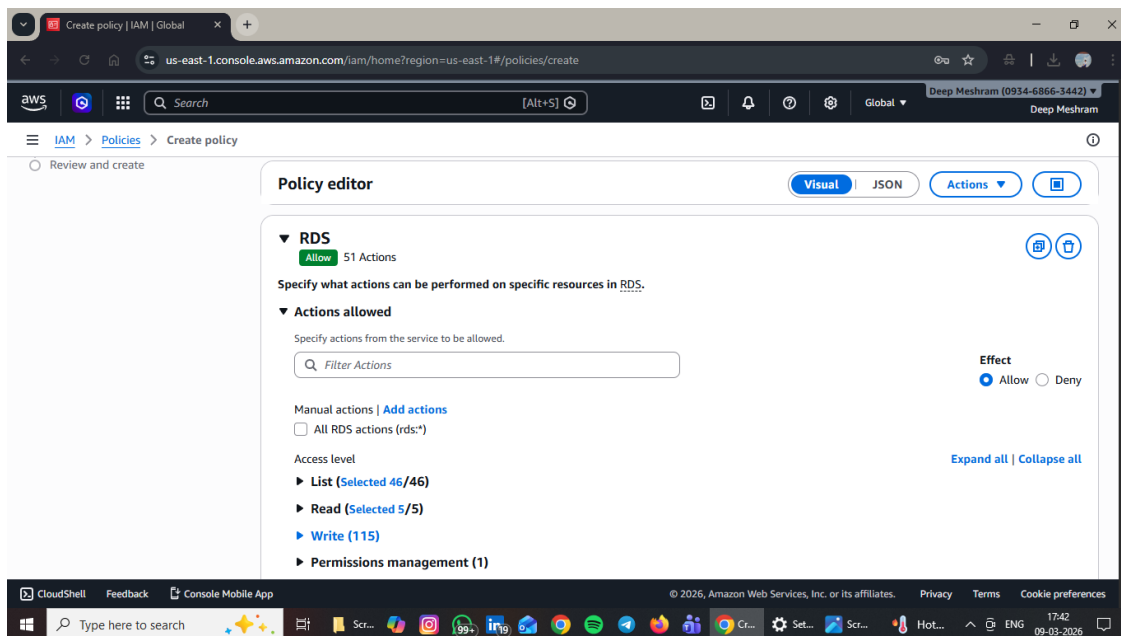

Go to IAM → Users → Create User, enter username sita, and proceed to the next step

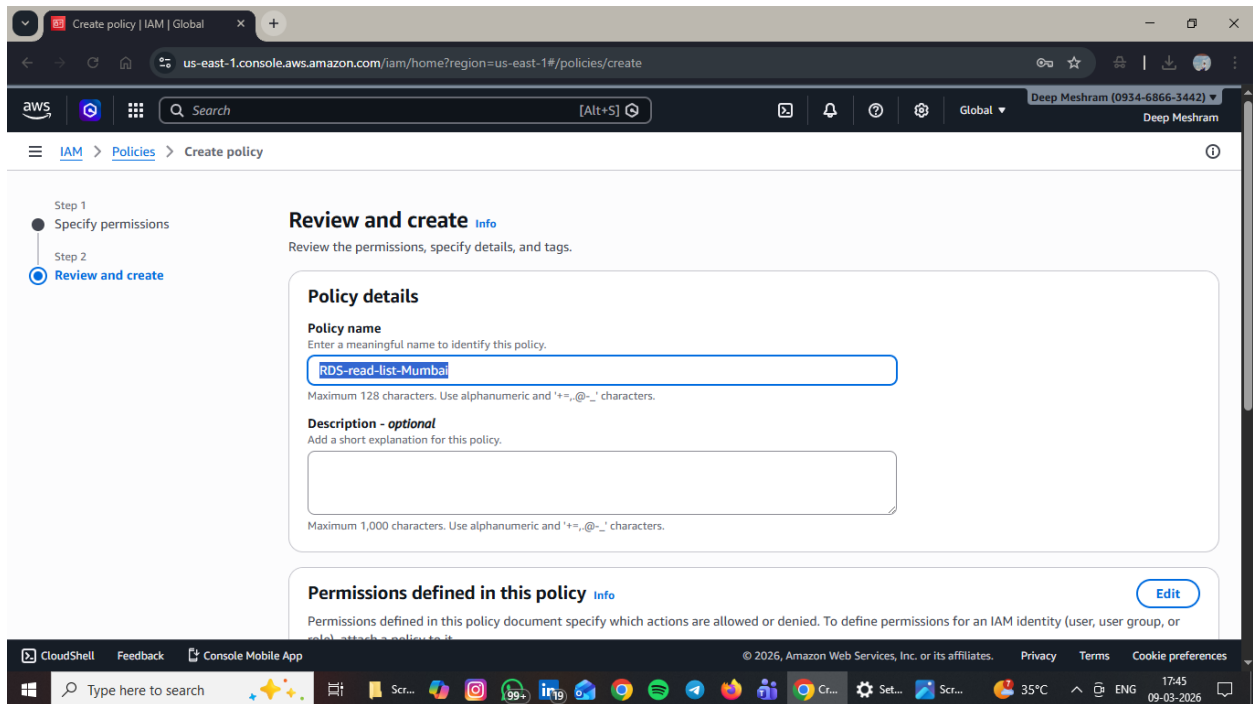

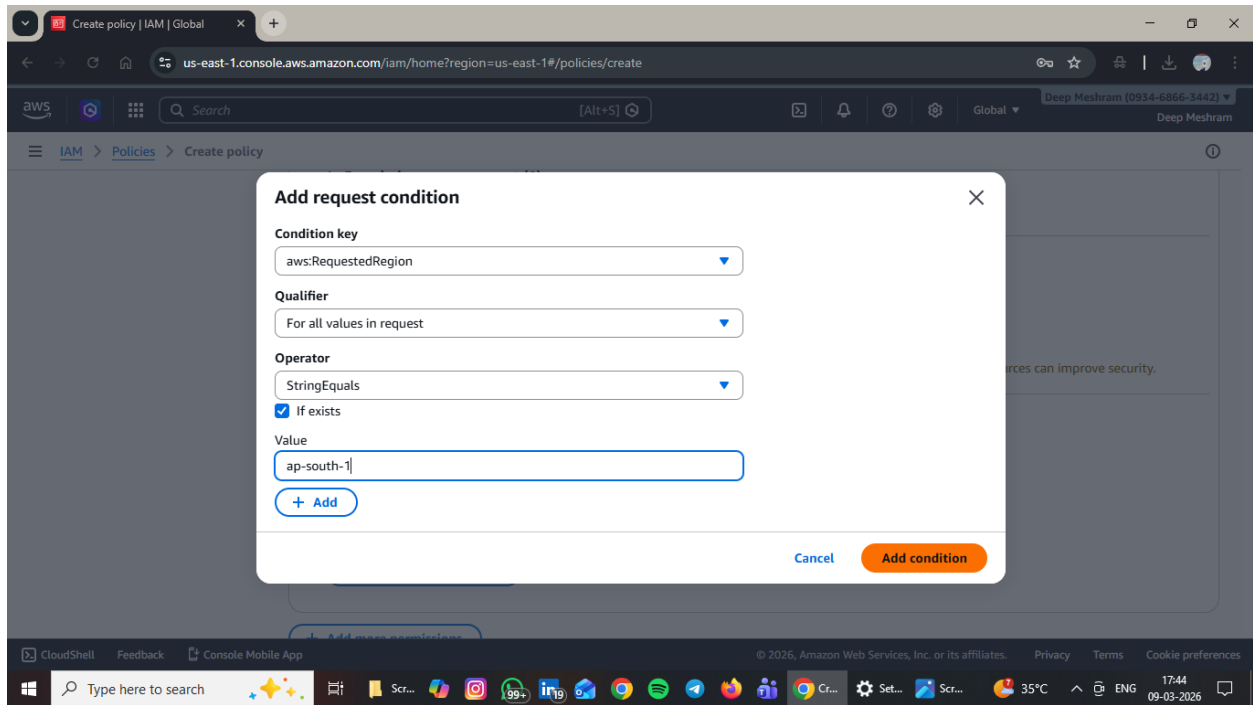

The screenshot shows the AWS IAM 'Create user' console in the 'us-east-1' region. The 'User details' section is active, showing the 'User name' field with the value 'sita'. Below this, there is a checkbox for 'Provide user access to the AWS Management Console - optional', which is checked. Under 'Console password', the 'Custom password' option is selected, and a password field is visible with masked characters. The console also shows a progress bar on the left with steps: Step 2 (Set permissions), Step 3 (Review and create), and Step 4 (Retrieve password).

The screenshot shows the AWS IAM 'Create user' console in the 'us-east-1' region, now at the 'Retrieve password' step. The 'Console sign-in details' section is visible, showing the 'Console sign-in URL' as 'https://093468663442.signin.aws.amazon.com/console'. The 'User name' is 'sita' and the 'Console password' is masked with asterisks. A 'Show' button is next to the password field. At the bottom, there are buttons for 'Cancel', 'Download .csv file', and 'Return to users list'.

Step 2) Create Custom Policy Go to IAM → Policies → Create Policy, select the Visual tab, and add the following policy.

Create policy | IAM | Global

us-east-1.console.aws.amazon.com/iam/home?region=us-east-1#/policies/create

Permissions defined in this policy [Info](#) [Edit](#)

Permissions defined in this policy document specify which actions are allowed or denied. To define permissions for an IAM identity (user, user group, or role), attach a policy to it

Allow (1 of 464 services) ☐ Show remaining 463 services

Service	Access level	Resource	Request condition
RDS	Full: List, Read	All resources	aws:RequestedRegion = ap-south-1 (if Exists)

Add tags - optional [Info](#)

Tags are key-value pairs that you can add to AWS resources to help identify, organize, or search for resources.

No tags associated with the resource.

[Add new tag](#)

You can add up to 50 more tags.

Step 3) Attach Policy to User

Go to IAM → Users → sita → Add Permissions → Attach Policies, select RDS-Mumbai-Read-Policy, and attach it.

Step 4) Verify Access from Sita User in Mumbai Region

Login using the sita IAM user, switch the AWS region to Mumbai (ap-south-1), open the RDS service, and verify that the user can successfully view and list RDS resources in this region.

Step 5) Verify Restriction in Other Regions

Change the AWS region to another region (for example Singapore or US-East-1) and try to open the RDS service. The user sita will not be able to access RDS resources because the policy allows access only in the Mumbai region
