

Task 3)

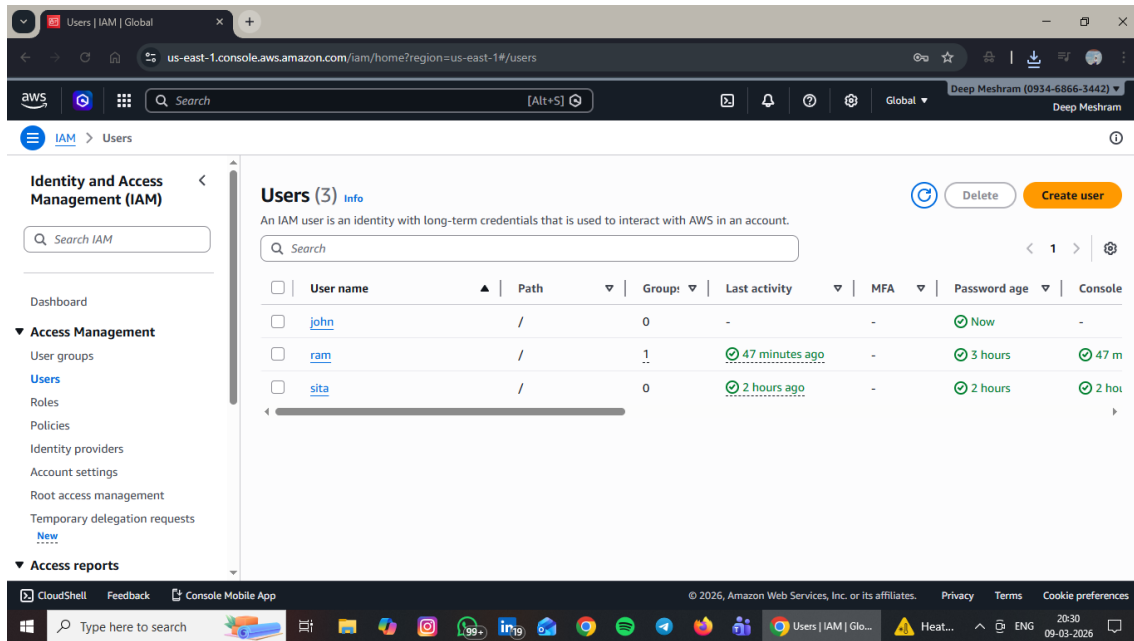

Create an IAM user named john & Create a time-based IAM policy that allows Amazon RDS read and list permissions only for 1 hour, after which the policy access should automatically expire.

Step 1) Create IAM User

Go to IAM → Users → Create User, enter username john, and complete the user creation process.

The screenshot shows the AWS IAM 'Create user' console in the 'us-east-1' region. The 'User details' section is active, showing the 'User name' field with the value 'john'. Below this, there is a checkbox for 'Provide user access to the AWS Management Console - optional', which is checked. Under 'Console password', the 'Custom password' option is selected. The console password field is masked with asterisks. At the bottom, there is a checkbox for 'Users must create a new password at next sign-in - Recommended', which is unchecked. The left sidebar shows the progress: Step 1 (Specify user details) is complete, Step 2 (Set permissions) is current, and Steps 3 (Review and create) and 4 (Retrieve password) are pending.

The screenshot shows the AWS IAM 'Create user' console in the 'us-east-1' region, now at the 'Retrieve password' step. The 'Console sign-in details' section is visible, showing the 'Console sign-in URL' as 'https://093468663442.signin.aws.amazon.com/console'. The 'User name' is 'john'. The 'Console password' is masked with asterisks, and there is a 'Show' link next to it. At the bottom, there are three buttons: 'Cancel', 'Download .csv file', and 'Return to users list'. The left sidebar shows the progress: Step 1 (Specify user details) is complete, Step 2 (Set permissions) is complete, Step 3 (Review and create) is complete, and Step 4 (Retrieve password) is current.

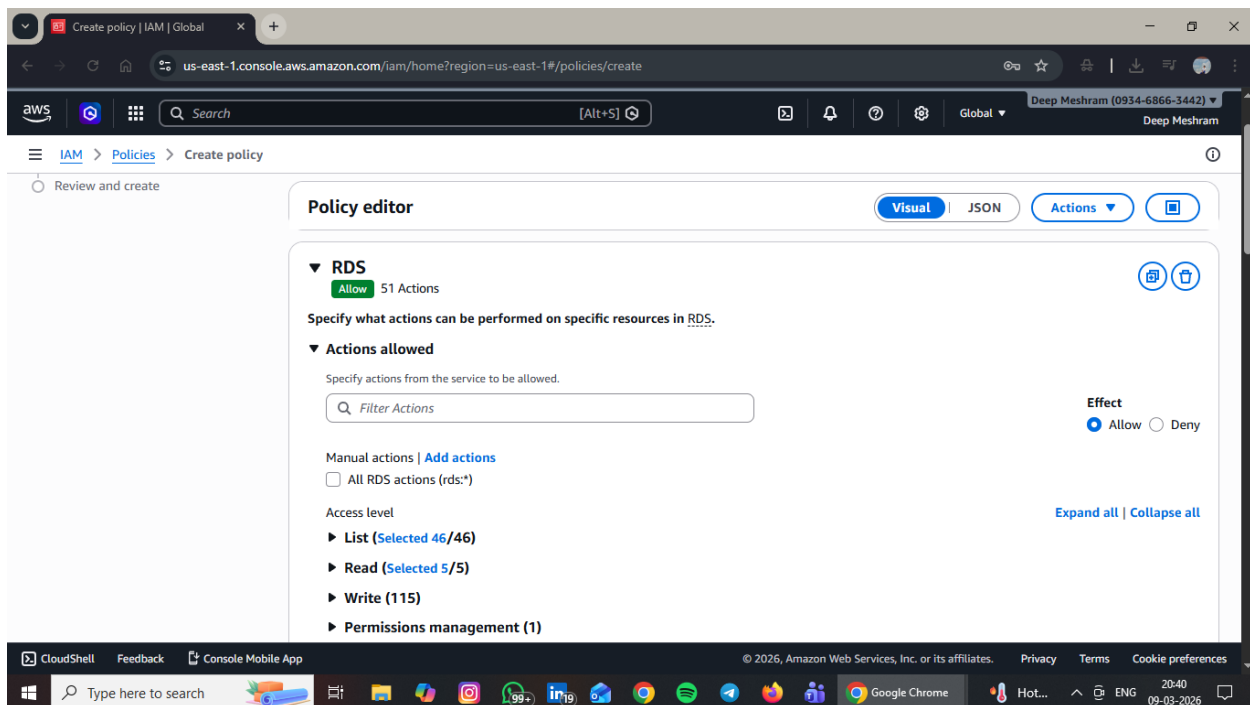

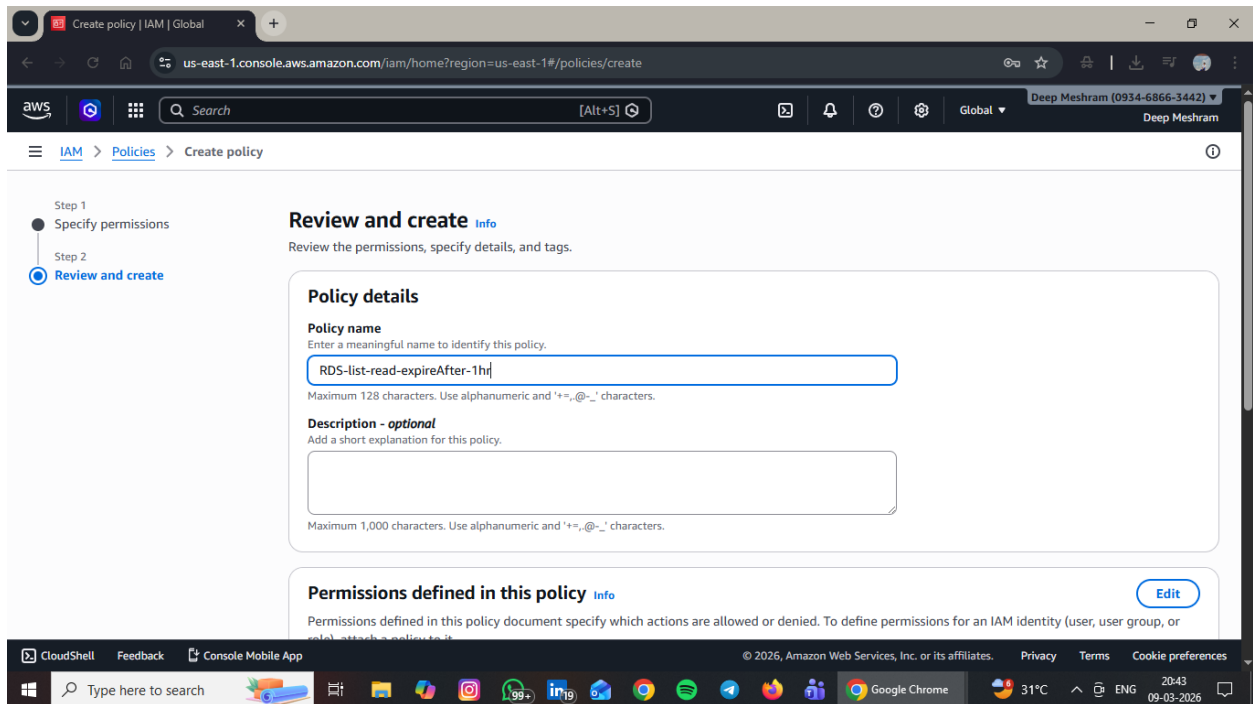

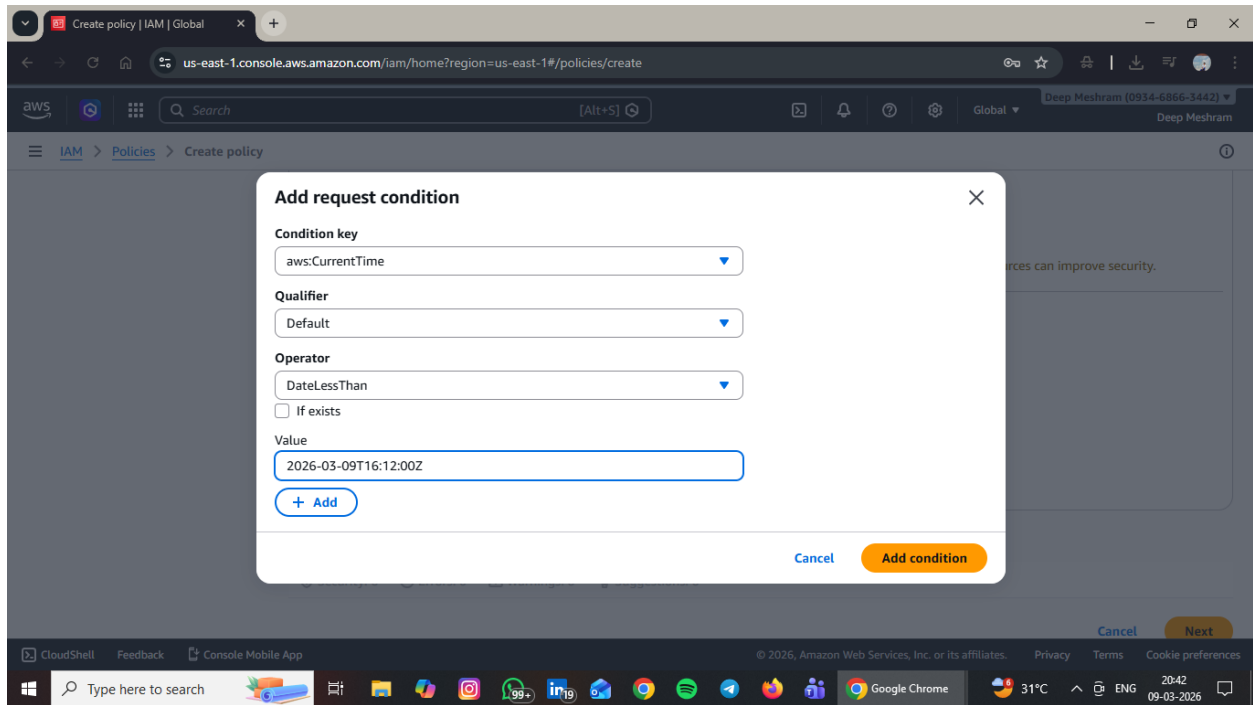

Step 2) Create Custom Policy

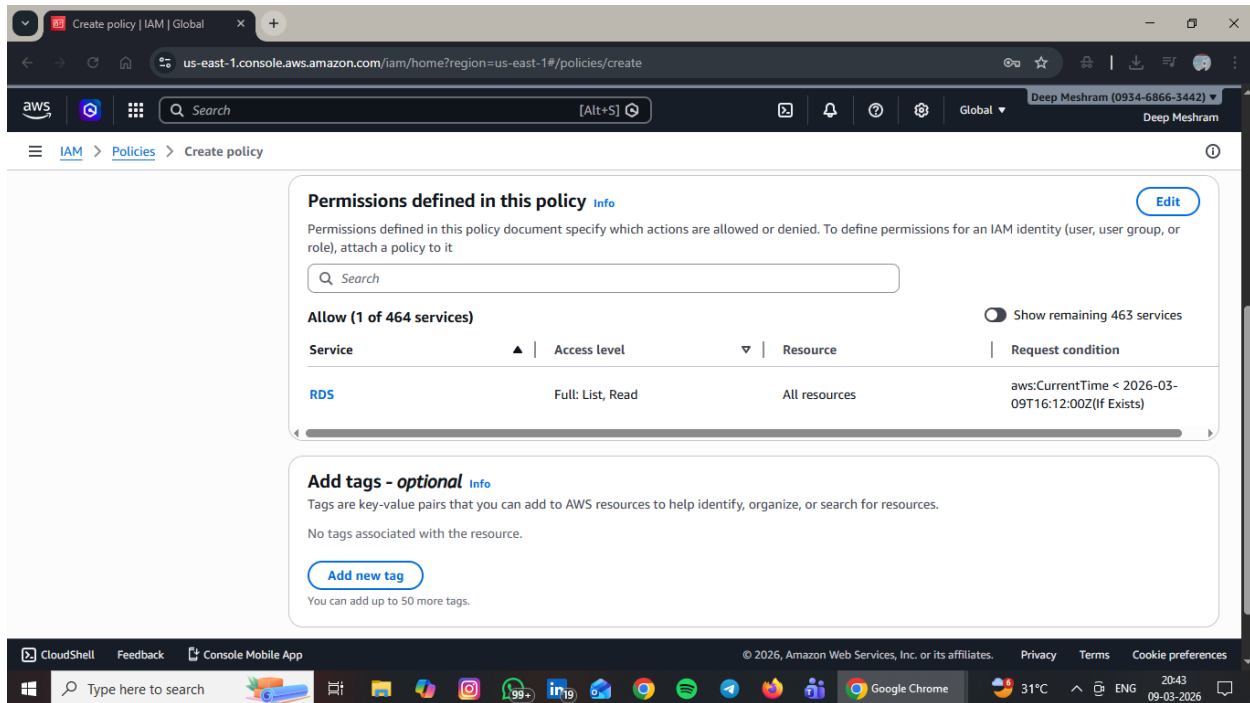

Go to IAM → Policies → Create Policy → Visual tab and add the following policy.

(Policy created at 20:42 IST and set to expire at 21:42 IST.

21:42 IST = 16:12:00 UTC, which is used in the policy.)

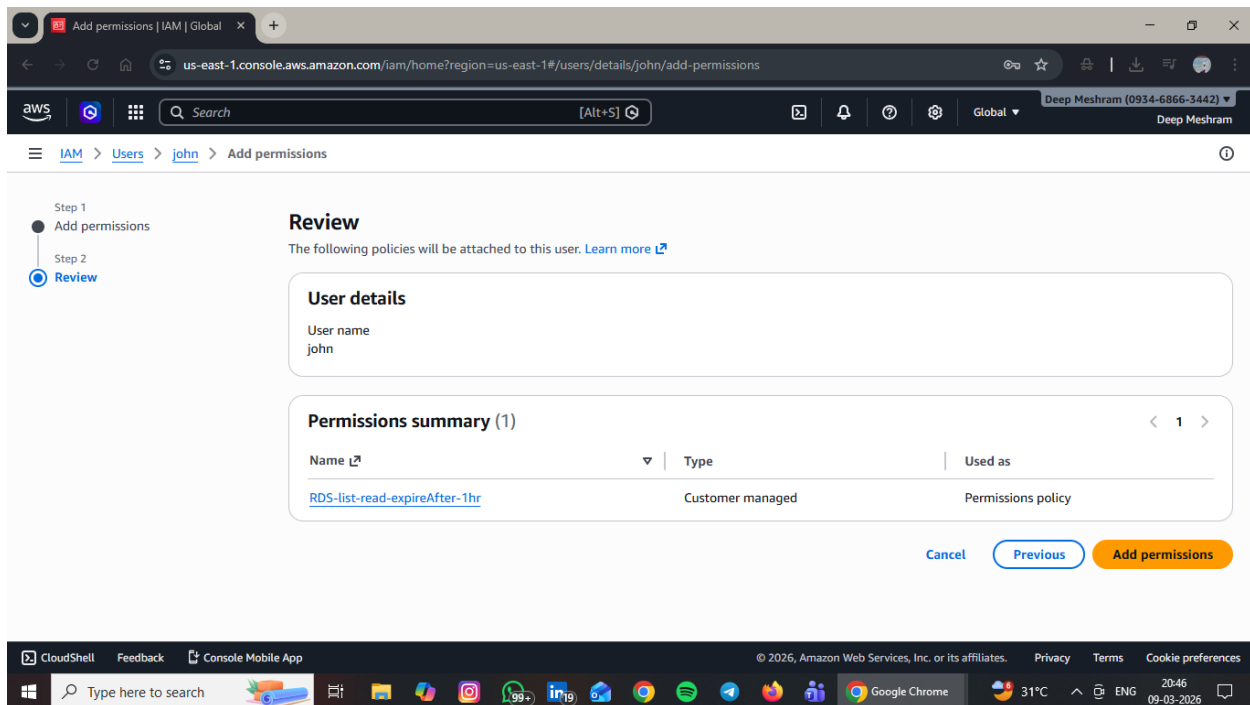

Step 3) Attach Policy to User

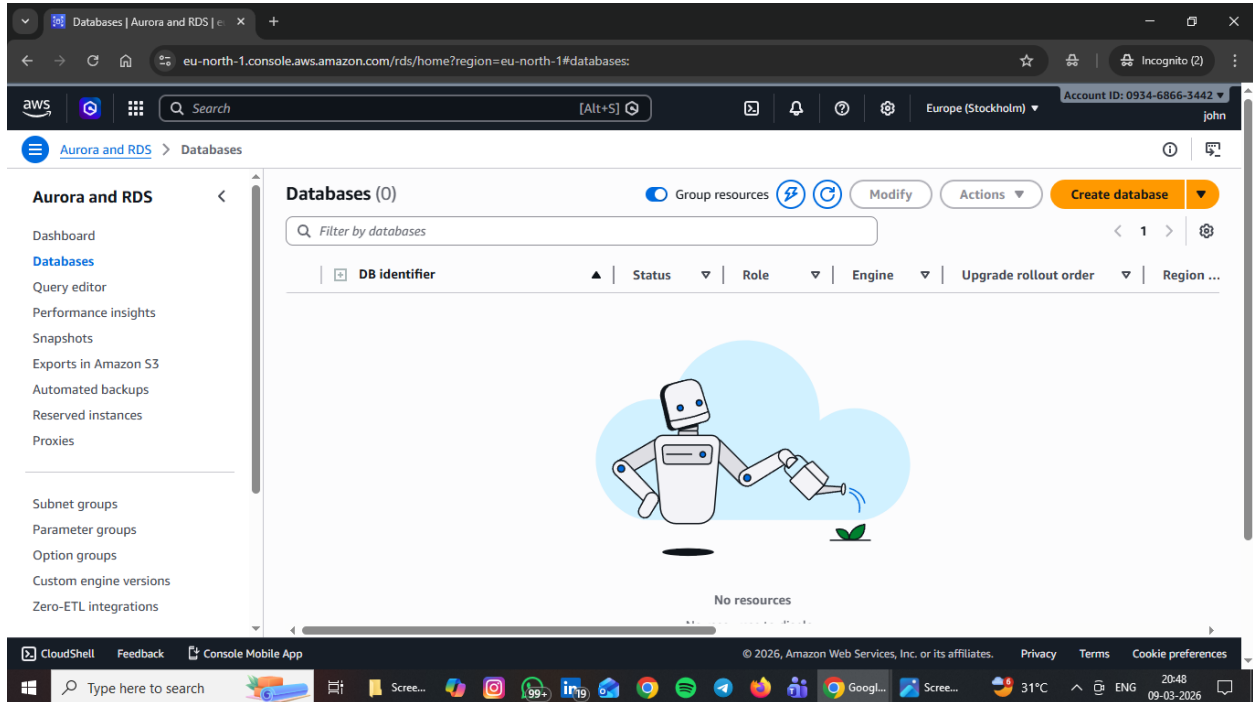

Go to IAM → Users → john → Add Permissions → Attach Policies, select **RDS-list-read-expireAfter-1hr**, and attach it to the user.

Step 4) Verify Access Before Expiry

Login using john IAM user, open the RDS service, and verify that the user can view and list RDS resources before the policy expiration time.

Checked at 20:48 IST, access works successfully.

Step 5) Verify Access After Expiry

After 21:42 IST, try accessing the RDS service again from the john user. The access will be denied automatically because the policy has expired.

Checked at 22:48 IST, Error occur.
